

# X-Lab – Leaders in Laboratory Interoperability Solutions

X-Lab builds innovative solutions to digitally connect laboratories and remove paper workflows. Our customers love the simplicity of the automation that saves them time and money, improves fast access to accurate data and reduces turnaround times and errors.

## **Giving you the complete picture**

To deliver integrated patient care clinicians need the complete picture. A picture that includes the very latest pathology results to ensure accurate, timely diagnoses. Whilst on-site Laboratory Information Management Systems (LIMS) provide the bulk of commonly requested test data, many tests need to be done off-site in specialist labs with access to expert knowledge. And often getting access to these vital results takes days or even weeks.

## **Connecting laboratory data for improved health outcomes**

At X-lab we break down the barriers between disparate laboratory systems and ensure speedy test requesting and results reporting back to the people who need it. Our seamless LIMS-agnostic network provides systems interoperability to all healthcare providers and fast access to test data for improved patient care.

# Marking a new era in digital healthcare

At X-Lab we enable more efficient communication between different Laboratory Information Management Systems (LIMS), all through a single interface. Instead of relying on outdated manual processes, our solutions allow test requests to be exchanged electronically.

---

**By swapping paper and point-to-point interfaces** for full interoperability, we help you

Empower intelligent healthcare

Reduce waste

Save time

Shorten turnaround times

**X-Lab – Leaders in Lab Interoperability**

# A trusted global partner

## Supporting 95% of UK labs

Established in 2006, X-lab is a trusted health and government partner and now supports 95% of UK NHS labs through a national pathology exchange network.

## 500 million

Our core solution, Labgnostic, was the interoperability foundation for the NHS Test and Trace service and was responsible for processing more than 500 million Covid tests during the pandemic.

## Connecting diagnostic organisations worldwide

As the leading system-agnostic lab interoperability provider, X-Lab currently connects hundreds of diagnostic organisations (primarily pathology labs) for instant digital interchange.

## Supporting over 180 LIS instances

The solution supports over 180 Laboratory Information System (LIS) instances, and covers a comprehensive range of disciplines and our library of over 6,000 coded tests is growing daily.

## Global partner

X-Lab is now operational throughout the UK, Europe, Australia, and the USA.

**X-Lab – Leaders in Lab Interoperability**

# Future-proofing diagnostic networks

Interoperability and data sharing are now fundamental requirements of global healthcare. Whilst Labgnostic is our core lab-to-lab interoperability solution, demands are arising across the industry for instant shared connectivity. At X-Lab we constantly strive to develop efficient, cost-effective ways of delivering healthcare for both providers and service users.

Our LabgnosticEQA solution delivers fast, accurate, automated External Quality Assurance (EQA) and Proficiency Testing (PT) for EQA vendors worldwide. And our remote web-based order communications portal, LabReach, enables marginalised users – such as remote screening clinics, occupational health, and community nursing – to receive results as fast as the big labs.

## X-Lab – Connecting the world's diagnostic systems

Our aim is to connect the world's diagnostic systems by streamlining interoperability and ensuring all data is at hand to deliver the best patient outcomes.
